Computer Physics Communications

Contents to volume 106

Computational physics

Fettes, W., I. Morgenstern and T. Husslein
Parallelization of the exact diagonalization of the $t-t'$-Hubbard model 1

Pech, J., A. Tarancón and C.L. Ullod
A dedicated computer for Ising-like spin glass models 10

Beliën, A.J.C., S. Poedts and J.P. Goedbloed
Two-dimensional equilibrium in coronal magnetostatic flux tubes: an accurate equilibrium solver 21

Nijboer, R.J., B. v.d. Holst, S. Poedts and J.P. Goedbloed
Calculating magnetohydrodynamic flow spectra 39

La Penna, G., V. Minicozzi, S. Morante, G.C. Rossi and G. Salina
Molecular Dynamics with the massively parallel APE computers 53

Hirvi, K.P. and J.P. Pekola
Determination of thermometric parameters from the conductance curve of the normal metal based tunnel junction array 69

Diyankov, O.V., I.V. Glazyrin and S.V. Koshelev
MAG – two-dimensional resistive MHD code using an arbitrary moving coordinate system 76

Smithe, D. and L. Ludeking
An eigenmode solution algorithm based on high-order power iteration with fractally ordered shifts 95

Becciani, U., R. Ansaloni, V. Antonuccio-Delogu, G. Erbacci, M. Gambera and A. Pagliaro
A parallel tree code for large N-body simulation: dynamic load balance and data distribution on a CRAY T3D system 105

Labudde, D., R. Mahnke and V. Frischfeld
Monte Carlo simulation of thermodynamic systems with cluster formation under different boundary conditions 181

Yousif, H.A. and R. Melka
Bessel function of the first kind with complex argument 199

Compagner, A., A.S. Berdnikov, S.B. Turtia and A. Larionov
Rounding errors in random number generators 207

Mardahl, P.J. and J.P. Verboncoeur
Charge conservation in electromagnetic PIC codes; spectral comparison of Boris/DADI and Langdon–Marder methods 219

Computer programs in physics

Flocke, N.
SPINSGA: A program package for the evaluation of properties of spin-1/2 Heisenberg systems using the symmetric group approach 114

Signer, A.
MENLO_PARC, a program for $e^+e^- \rightarrow$ 4 jets at next-to-leading order 125

Munehisa, T., K. Kato, D. Perret-Gallix and Y. Shimizu
GGPS: a two-photon event generator based on the parton shower method 139

Varga, K. and Y. Suzuki
Solution of few-body problems with the stochastic variational method. I. Central forces with zero orbital momentum 157

Todesco, E., M. Gemmi and M. Giovannozzi
NERO: a code for the nonlinear evaluation of resonances in one-turn mappings 169

Malmgren, T.G.M.
An iterative nonlinear discriminant analysis program: IDA 1.0 230

Stepanek, J.
A program to determine the radiation spectra due to a single atomic-subshell ionisation by a particle or due to deexcitation or decay of radionuclides 237

Kreckel, R.
Parallelization of adaptive MC integrators 258
